

## What is an EnviroCycle?

**EnviroCycle** is a unique system developed in Australia which takes household waste from the toilet, bathroom, kitchen and laundry and treats it in an underground tank to a level of purity approved by the relevant health authorities throughout Australia.

So efficient is the **EnviroCycle** purification technique that, under normal operating conditions, it results in clear odourless water - ideal for re-use in irrigating the garden automatically. (As per local authorities approval).

## EnviroCycle provides the answer to all these problems:

- Conserves water to re-use
- Minimise excess water rates
- Does not pollute the environment
- An efficient and clean way to dispose of domestic waste water
- Eliminates transpiration bed requirements - you can make better use of your property
- Inexpensive alternative to septic and pump-out systems
- Adds value to your property
- Overcomes summer water restrictions
- Saves time and money in watering areas of your garden (as per local authorities approval)
- Fully automatic
- Complete maintenance service is available
- Available for domestic, commercial or public installation
- Provides peace of mind
